Education

University of Birmingham, Bsc Computer Engineering	2026 - 2029
Newstead Wood Grammar School	2023 - 2025
• A-Level: Mathematics (A*), Physics (A), Computer Science (A)	
Buller Wood School for Boys	2018 - 2023
• GCSE: 11 GCSEs (Grades 9-6), including a (9) in Mathematics and (8) in English Language and Literature	

Work Experience

Pwc Technology Work Experience	June 2024 - July 2024
- Analysed structured test datasets within a simulated enterprise environment to identify inconsistencies and anomalies, applying logical problem-solving to trace root causes and correct errors impacting database accuracy and reporting reliability. - Produced visual summaries including pie charts and categorised data views to communicate trends, improving accessibility of key insights for non-technical stakeholders and supporting clearer interpretation of large datasets. - Gained exposure to data governance and validation workflows, collaborating on problem solving challenges focused on maintaining data integrity, enforcing business rules, and improving consistency across interconnected data tables.	
ADEX TUTORS Founder, Tutor	Sep 2025 - Present
- Founded and scaled an independent tutoring initiative delivering GCSE and A-Level support in Mathematics, Mechanics, and Computer Science, managing student onboarding, scheduling, lesson planning, and ongoing progress tracking. - Designed structured, exam-focused lesson frameworks tailored to individual weaknesses, breaking down complex topics such as mechanics modelling, algorithms, and problem-solving strategies into clear, step-by-step methods. - Built and retained a consistent base of students through referrals, maintaining strong relationships with parents through regular progress updates and feedback, all while monitoring performance using structured assessments and adapting teaching strategies to improve confidence, exam technique, and overall academic outcomes.	

Projects and Responsibilities

Clout AI AI-Powered Content Analytics, Founder	2026 - Current
- Built and launched a full-stack B2C SaaS analytics platform in under 10 weeks using Next.js, TypeScript, and Supabase, with OAuth connections for TikTok, Instagram, YouTube, and Facebook, deployed on Vercel with CI/CD. - Engineered a multi-stage AI analysis pipeline ingesting post-level social data and synthesising metric-backed growth reports (ranked fix lists, posting time analysis, competitor gap scoring) via Anthropic Claude (Opus), VADER, and Whisper; decoupled processing using BullMQ and Upstash Redis to achieve 15–30s async job completion. - Developed a Recharts analytics dashboard surfacing per-post engagement breakdowns, hook scores, and improvement roadmaps with webhook-verified usage tracking and Supabase RLS-enforced feature gating across competitor tracking, AI coaching, and platform quotas.	
CoreSense AI-Powered Personal Development, Founder	Dec 2025 - Current
- Architected and shipped a cross-platform iOS/Android coaching app (React Native/Expo SDK 54, FastAPI on Railway, Supabase Postgres) that unifies HealthKit metrics, mood, sleep, habits, and tasks into a GPT-powered daily coach, deployed to TestFlight for CI/CD then deployed to the App Store. - Engineered the full backend solo: 10+ FastAPI feature routers and 30+ idempotent Supabase migrations with JWT auth and RLS, powering weekly recap and pattern-detection pipelines that turn raw logs into personalised insights in under ~400ms per request. - Designed a habit-streak and milestone gamification retention system layered over an Apple-backed subscription tier, lifting 7-day beta retention by ~28% versus the pre-gamification baseline.	
Calitrack AI Fitness App	Aug 2024 - Mar 2025
- Researched, designed then built an AI-powered fitness app in Python/Kivy that analyses user performance data and generates adaptive workout plans, shipping a working prototype across 7 two-week sprint cycles. - Architected a gamified UX with skill tracking, workout logging, and a milestone point system, organising 8+ screens around a single 8px spacing grid and 3-tier typography hierarchy. - Ran continuous iterative user testing with a consistent stakeholder per sprint, conducting user research, documenting findings, and translating feedback into successive prototype iterations before final delivery.	
Leadership Role RCCG His Glory Arena	Sep 2018 - Present
- Lead and conducted the Youth sector in the church organising multiple services and mentored younger children both personal development and learning how to play musical instruments. - Dedicated over seven years to playing the keyboard and bass for the church, concurrently ensuring the highest quality production of our livestreams, and maintaining a consistently high standard of music during our services as sound engineer.	

Skills and Certifications

- Google Cybersecurity Professional Certificate:** Completed 182-hour accredited programme covering network security, threat analysis, SIEM tools (Splunk & Chronicle), incident response, Linux, SQL, and Python security automation.
- Programming Languages:** Python, JavaScript, HTML, CSS, ReactNative, React, React Native
